FOREWORD

The Population and Housing Census of Maldives is the largest national statistical exercise and provide the most comprehensive source of information on population and households. Maldives has been conducting censuses since 1911 with the first modern census conducted in 1977. Censuses were conducted every five years since between 1985 and 2000. The 2005 census was delayed to 2006 due to tsunami of 2004, leaving a gap of 8 years between the last two censuses. The 2014 marks the 29th census conducted in the Maldives.

Census provides a benchmark data for all demographic, economic and social statistics in the country to the smallest geographic level. Such information is vital for planning and evidence based decision-making. Census also provides a rich source of data for monitoring national and international development goals and initiatives.

Data from various censuses serve as a comparable basis reflecting the achievements of past policies carried out by the government for the benefit of the people. The results of the census will provide essential data for decision makers, policy planners, international agencies and the business community in assessing the progress of the last few decades and in planning the future spectrum of development.

I am greatly indebted to the general public for their support and cooperation to the census. I thank each and every individual, who responded to the census and made possible this valuable data set. I hope that the experienced data users, as well as students and the wider public, will find it useful.

My acknowledgement and appreciation goes to the hard work of each and every individual who were involved and contributed to the census data collection management, processing and dissemination.

I am grateful to development partners for their generous financial support and the consultants for their technical support.

Finally, the success of this census is attributed to the concerted effort and dedication of the management and staff of the National Bureau of Statistics and I would like to take this opportunity to thank them wholeheartedly.

Abdulla Jihad
Minister of Finance & Treasury

INTRODUCTION

The preliminary results of the population and housing census 2014 were released on 5 November 2014. This included the population by sex at island level, based on the daily records used during census operation.

This publication presents the final results of the 2014 Population and Housing Census. It contains the information on the population by age and sex and households by type, at atoll and island levels.

Data collected in the census include a wealth of information: population size, age, sex, citizenship, religion, migration, education, economic activity, marital status, and housing. Information on the living arrangement of children and elderly population was also collected. The detailed reports by various themes will be disseminated subsequently.

The 2014 census is making a substantial change in the population that is included in the census, thereby moving closer to the international recommendations for census taking. According to the international recommendations, only the population residing in the country should be included in the census. In our past censuses, foreigners residing in the Maldives were not included in the census while we include Maldivians residing abroad. The Maldivians residing abroad were also included in the 2014 census to enable comparison with previous censuses.

Census 2014 data introduces the concept of 'Resident Population' consisting of Resident Maldivians and Resident Foreigners, which will form the coverage of future censuses. Due to the numerous difficulties and challenges posed in enumerating the foreign population, there is an under coverage of this population, when compared with administrative records.

However, in order to allow comparisons with previous censuses the concept of Maldivian population is also used. This includes Maldivians residing in Maldives as well as those residing abroad. It is our intention to exclude the non-resident Maldivians from the future censuses. The coverage of Maldivians living abroad is not complete, due to the many challenges posed in their enumeration.

The Maldives Population and Housing Census were carried out from 20 to 30 September 2014 and a total of 3,588 personnel were involved in the census operation throughout the country. Census covered 188 administrative islands, 109 resorts and 128 industrial and other islands of the country.

Data Processing of 2014 Census was carried using Intelligent Character Recognition (ICR) and Optical Mark Recognition (OMR) method. Data consistency checking and editing has been done using scientific methods available, with support from international experts in this field.

ACKNOWLEDGEMENTS

This publication has been made possible by the dedicated support of everyone involved in the organization and conducting of the census, from government staff in various ministries and offices to volunteers from public and private sector organizations. Through their dedication and hard work in their respective roles as Officials, Atoll Coordinators, Atoll Technical Advisors, Supervisors, Enumerators, and Data processing staff, this exercise was executed as planned.

We thank each and every Maldivian and foreigner, who responded to the census and provided their valuable information to our census enumerators.

In accomplishing this task, the National Bureau of Statistics owes a debt of gratitude to all those who contributed their time and effort in making this census a success.

We would like to express our gratitude to the United Nations Population Fund (UNFPA), United Nations Children Fund (UNICEF) and World Bank for their generous Technical support. We would like to the international consultants who provided their technical support.

The National Bureau of Statistics acknowledges the support of the Government, for providing necessary funding and support for the execution of this nationwide operation.

Glossary of Terms and Definitions

Term	Definition
Total Enumerated Population	This is the total population enumerated in the census. It includes Usual Resident Population and Non Resident Maldivian Population.
Total Resident Population	Population who have lived or intends to reside in Maldives for 1 year or more. This includes Resident Maldivian Population and Resident Foreign Population.
<i>Resident Maldivian Population</i>	Maldivians who have lived or intends to reside in <u>Maldives</u> for 1 year or more
<i>Resident Foreign Population</i>	Foreigners who have lived or intends to reside in <u>Maldives</u> for 1 year or more
Total Maldivian Population	Includes Resident Maldivians and Non Resident Maldivians
Non Resident Maldivian Population	Maldivians who have lived or intends to reside <u>abroad</u> for 1 year or more
Place of Enumeration	The island where the person was found on census night. The migration tables however excludes the non-resident Maldivians who were enumerated in the Maldives.
Place of Usual Residence	The island where the person resided at the time of census. Usual residence is determined based on the duration of one year or more. If the person has lived in that island for less than one year, but intends to live for one year, that island is considered as the usual residence of the person.
Place of Previous Residence	The island/country where the person has lived for 1 year or more before moving to the place of usual residence. For people who have lived in many different islands/countries over the past, this is the island/country where the person lived immediately prior to moving to the place of usual residence.
Locality	Refers to broad geographic level such as Republic, Male', Atolls (including Administrative islands, Non- Administrative islands)
Administrative Islands	The administrative islands in the 20 administrative atolls. Male' is also an administrative island.
Non- Administrative Islands	Non-administrative islands covers tourist resorts, industrial islands and islands used for other purposes.
Sex Ratio	Number of the males per 100 female in the population (males divided by females x 100)
Average Annual Growth Rate	The average annual growth rate of the population between two censuses
Household	A household refers to a unit where people live within the same arrangement, usually sharing the same living space, live and eat together. Those whose sleeping arrangements are different from where they take their meals, are counted in the household where the sleeping arrangements are made.
Maldivian Household	Households headed by a Maldivian or households where all members are Maldivian.
Migrant	A person who have ever changed his/her island of usual residence.
Non-migrant	A person who has never changed his/her island of usual residence.
Lifetime Migrant	A person whose island of usual residence differs from his/her birth place.
Reasons for last migration	Reason for moving to usual residence from previous residence.
Duration of Residence	Number of years lived in usual residence.

MIGRATION

INTRODUCTION

The process of distribution and redistribution of population occurs through natural growth and migration. The redistribution through migration is shaped by a variety of demographic, geographic and socio-economic factors. These include the distribution and utilization of natural resources and infrastructural development, which results from local factors as well as policies, and programs of government agencies.

This release presents the patterns of international migration to and from the Maldives as well as internal migration within the Atolls and islands of the country. Census 2014 broadly measured internal migration through place of birth, place of registration, place of usual residence, reasons for migration and place of previous residence. International in-migration of foreigners to the Maldives cover the place of birth, duration of stay in the Maldives and reasons for migration.

As for international out-migration of Maldivians, the place of birth, place of registration, country of usual residence was covered in the census. As this segment of the population do not form a part of the resident population, this data is presented briefly in a separate section at the end.

During the census, persons were enumerated in the household where they were located during census night. Usual residence however, is the place where the person usually resides. Usual residence is determined based on the duration of one year or more. If the person has lived in that island for less than one year, but intends to live for one year, that place is considered as usual residence of the person. Hence the island of enumeration and island of usual residence will be different for persons who were temporarily away from their island of usual residence during the census night.

The measure of the migratory movement of the population is based on the comparison of data on the place of previous residence with the place of usual residence at the time of Census. A person who have ever changed their island of usual residence are classified as a migrant according to this definition.

This release will also look into lifetime migrants. For the purpose of this analysis, a life-time migrant is defined as one who was born outside their island of usual residence. However, one needs to be aware of the limitations in interpreting lifetime migrants using place of birth.

This release will focus on the analysis of the resident Maldivian Population and Resident Foreign population separately. This is the population who have lived or intends to reside in Maldives for 1 year or more. The definition used in this chapter is given in the glossary.

Distribution of Resident Population

The resident population is distributed within the country among administrative and non- administrative islands.

The resident population of Maldives in Census 2014 is 402,071. Out of this, the resident Maldivian population accounts to 338,434 and resident foreigners account for 63,637. Over a third of the population (38 percent) is enumerated in the capital Male', 53% in 187 administrative islands, 7 % in 109 resort islands and 2% in industrial and other non-administrative islands.

Population size of the 187 inhabited islands vary substantially ranging from 106 residents in V.Rakeedhoo to 11,129 in S.Hithadhoo. Highest number of islands (35 % of islands) have a resident population between the ranges of 500 to 999. These 65 islands have 22 percent of the resident population (figure 1). This is followed by the size categories of islands with less than 500 population and 1,000 to 1,999, each with 51 islands (27 % of islands). However the percentage share of population is highest (33%) in islands with 1,000 to 1,999 size category compared to 8% of population in islands below 500 category. There are 20 islands with a population above 2,000 inhabitants in the administrative islands of the 20 Atolls. These islands have 36 percent of the resident population. It is important to note that apart from the capital Male' with a population of 153,904, only 4 administrative islands have a population size greater than 5,000. These 4 islands are GDh. Thinaadhoo, HDh. Kulhudhuffushi, Gn.Fuvahmulah and S.Hithadhoo.

Figure 1: Percentage of islands and resident population in administrative islands by size class of population, 2014 (excluding Male')

Distribution of Resident Maldivian Population

Similar to Figure 1, Figure 2 presents the same information for the resident Maldivian population. Almost two third of the islands have a population less than 1,000 people and compose 34 percent of the total resident Maldivian population. There still exist 2 island communities with population less than 100. This is seen if we enlarge the band of <500 population. These 2 islands are V.Thinadhoo and B.Fehendhoo. It is important to note that when the resident foreigners are included (and hence the resident population), there is no island with a population below one hundred inhabitants. The maximum number of people live in islands with a population ranging between 1,000 to 1,999. This group contributes 31 percent of the total population. S. Hithadhoo has exceeded the mark of 10,000 with respect to population.

Figure 2: Percentage of islands and resident Maldivian population in administrative islands by size class of resident Maldivian population (excluding Male'), 2014

Resident Maldivian Population by Place of Birth

Of the resident Maldivian population, 99 percent of the Maldivians are born in Maldives while 1 percent of the population (3,844 persons) are born abroad.

Figure 3 shows the distribution of the resident Maldivian population by place of birth. Out of the total Maldivian population, 79,641 persons (almost one fourth or 24% of population) were born in Male'. This is likely to be due to better health facilities in the capital, as it is a common practice for mothers to come to Male' for delivery. Eight percent of the population was born in both Addu (S) and South Thilandhumathi (HDh).

Figure 3: Resident Maldivians by place of birth, 2014

Resident Maldivian Population by Place of Registration

As per the legislation in Maldives, Maldivians have to be registered in the country. The place of registration may or may not be different from place of birth and place of usual residence. As expected, (Annex Table MG1), population size according to place of registration as well as place of birth is highest in highly populated Atolls. Out of the total Maldivian population 57,338 persons (17 percent) is registered in the capital city Male' (Figure 4). Similar to the percentage distribution by birth, highest proportion of the registered population in the Atolls are also found in Addu (S) and South Thilandhumathi (HDh), at 9 percent and 7 percent respectively.

Figure 4: Resident Maldivians by place of registration, 2014

Out of the 79,641 Maldivians born in Male', 43 percent are registered in islands other than Male', while 56 percent of them are registered in Male'. The difference in number of persons born in Male' and registered in Male' is likely to be due to the better medical facilities in Male', causing people from other islands to come to Male' to give birth, as mentioned above.

Out of the 57,338 Maldivians registered in Male', 78 percent were also born in Male'. The same can be observed for the rest of the Atolls, whereby the highest proportion of registered population of the atoll is also born in that Atoll. It is also seen that a substantial proportion of registered population of each Atoll is born in Male', ranging from 7 percent to 26 percent across the Atolls (Figure 6 below).

Figure 5: Percentage share of registered population of Atoll, born in respective Atoll and Male', 2014

Population by Place of Usual Residence and Place of Registration

Usual residents consist of persons who have been living in the island where they were residing for one year or more or intend to do so. The place of usual residence can be the same or different with place of enumeration, place of registration or place of birth. Male', being the capital city and the most dynamic socio-economic hub of the country, experiences a heavy influx of population from other islands.

Out of the 338,434 resident Maldivians, 126,080 (37%) were usual residents of Male' and 212,004 (63%) were usual residents of the Atolls. Out of the usual resident population of Male' 98% were enumerated in Male' while 2 percent were enumerated in the Atolls. Similarly 97% of usual residents of the Atolls were enumerated in the Atolls while 3% were enumerated in Male'. These are the persons who were away from their usual residence during the census night (Refer to Figure 6).

Out of the 126,080 usual residents of Male', 43 percent are registered in Male' (figure 7), while the majority (55%) are registered in other islands.

Among the population residing in Male' who are registered in other islands, highest number of people are those registered in Addu (S) at 7 percent. This is followed by those registered in South Huvadhu Atoll (GDh) at 5% and North Thiladhunmathi (HA), South Thiladhunmathi (HDh), North Huvadhu Atoll (GA), Kolhumadulu (Th) and North Maalhosmadulu (R) each at 4 percent.

Figure 7: Usual resident Population in Male' by place of registration

Majority of the usual residents of the Atolls (95 percent) are registered in the islands in the respective Atolls. Apart from Male', the percentage share of usual residents of the Atoll registered in that particular Atoll, varies from 55 percent in Male' Atoll (K) to 95% in North Maalhosmadulu (R) Atoll. (Figure 8 below)

While Male' hosts 38 percent of the total population, the population residing in Resorts and Industrial islands has also increased. Majority of the residents living in Resorts and industrial islands are registered in Addu (S), followed by those registered in South Thiladhunmathi (HDh). Only 3.9 percent of the usual resident are registered in Male'.

Resident Maldivian Population in Male' by Aspects Used to View Internal Migration

Figure 9 shows the population of the capital Male' by different variables used to study internal migration. Census enumerated the population by place where they were present on Census night. As such a total of 133,412 Maldivians were enumerated in Male'. After excluding the 4,031 Maldivians that usually reside abroad, a total of 129,381 Maldivians were amongst those enumerated in Male'.

A total of 126,080 Maldivians stated their usual place of residence as Male' at the time of census. As per the definition of usual residents, these are people who have lived or intends to live in Male' for a period of one year or more. Those Maldivians who reported Male' as their place of birth accounts for 79,641 persons, while 57,338 reported Male' as their place of registration. (Excludes the non-resident Maldivians). It can be observed from figure 9 that more than double the number of those who are registered in Male' usually reside there.

When the foreigners residing in Male' are included, the enumerated population in the capital increases to 153,904.

Figure 9: Resident Maldivian population enumerated, born, usual resident, registered in Male' (exclude non-resident Maldivians) , 2014

Usual Resident Maldivian Population with a Change in Residence

Table 1 shows the population with a different usual and previous residence (considered as migrants) as well as population without a change in their usual residence (considered as non-migrants). The table shows that the majority of the population has never changed their place of usual residence. Out of the 338,434 resident Maldivians 44 percent of the population (147,927) had shifted their residence.

Figure 10: Percentage share of migrants and non-migrants, 2014

In contrast to the pattern that has been characteristic in Republic and Atolls, Male' population consists of high percent of migrants than non-migrants in comparison to their place of previous residence. This is expected as Male' being the hub of development, attracts residents from across the country. Non- administrative islands comprise mainly of resorts and industrial islands with migrants from administrative islands living there due to employment.

It is interesting to look at migration pattern in the Atolls including Administrative and non-administrative island. Table 1 presents migrants for Atolls. Administrative islands in all of the 20 atolls have a higher share of non-migrant population. However when comparisons were made with the total number of islands including administrative and non- administrative islands, the pattern in some Atolls are totally different. This is observed in Male' Atoll (K), when the non-administrative islands are included in the total, the Male' Atoll (K) shows a higher share of migrants. Similarly, in North Ari Atoll (AA) and South Ari Atoll (ADh) the percentage of the migrant population increases with the inclusion of non-administrative islands. As these are atolls where most of the tourist resorts are located, residents from administrative islands work in resort jobs. As resorts are separate islands, those working there also have to live there, and as per the definition of place of usual residence used in census, these migrant workers are considered as usual residents, if they live or intends to live in the resort for one year or more. Only a few resorts have daily commuting means available, while most resort workers only gets to visit the islands where their family reside and which they considered as their home islands, only a few times a year during their annual leave.

Table 1: Percentage of Migrant and non-migrant population by Atolls, 2014

Atoll	Administrative Islands		Administrative and Non-Administrative Islands	
	% of Migrant population	% of Non Migrant population	% of Migrant population	% of Non Migrant population
North Thiladhunmathi (HA)	29	72	28	70
South Thiladhunmathi (Hdh)	12	86	12	86

Hadhhdhunmathi (L)	38	60	34	64
North Ihavandhippolhu Atoll (PA)	30	68	33	66
South Ihavandhippolhu Atoll (PAh)	34	64	31	68
Gnaviyaval (Gn)	25	74	25	74
Addu (S)	34	65	34	65

Migration varies on the basis of sex, age and other social and economic characteristics. Figure 11 examines sex differentials in the migratory process of the resident Maldivian population. As seen by Figure 11, migration in the country is dominated by males. 54 percent of the migratory population is male while 46 percent of the women had a change in residency. The same trend is observed across the Atolls. However in Male', female migrants are more than male migrants.

Figure 11: Percentage share of migrants by sex, 2014

Similar to Table 1, Table 2 also looks at the migrant population by sex for administrative islands and the atoll total including non-administrative islands. Among the administrative atolls, Male' Atoll (K) has the highest number of male migrants compared to the rest of the atolls. This percentage of male increases with the inclusion of non-administrative islands.

Table 2: Percentage of Migrant population by sex, 2014

Atoll	Migrant Population In Administrative Islands		Migrant Population in Administrative and Non-Administrative Islands	
	Male	Female	Male	Female
North Thiladhunmathi (HA)	48	52	47	53
South Thiladhunmathi (HD)	50	50	48	51

Addu (S)	52	48	50	52

Figure 12 gives the usual resident Maldivians by place of previous residence. It is interesting to note that out of the 147,927 migrants, 10% (14,103 persons) who had previously resided abroad had returned back to reside in the Maldives. This is expected as many Maldivians attain their higher education abroad, requiring to live for a year or more outside the country. It's important not to confuse this as the percentage of people who have ever lived abroad for a year or more. For persons who have moved their place of usual residence several times, census captures only the most recent move. (For example: If a person lived abroad for several years and upon return resided in HA Atoll for another few years and again moved residence to Male' and lived there at the time of Census, his/her previous residence will be recorded as HA Atoll and not abroad, in the Census data)

The highest share of the migrant population (20%) has lived in Male' previously. This is likely to be due to the common practice whereby many people from the islands undergo their schooling in Male', in search of better education and employment opportunities. This is also common for atolls with more resorts. Figure below shows the distribution of usual resident Maldivians by place of previous residence. (Admin and non-admin islands included in each atoll total)

Figure 13 depicts the population with a different previous residence by reason for migration to their current residence. It is interesting to note that the highest percentage of the population are return migrants to live in this island (25 percent). While 22 percent of the population has changed residence for education, the population who has moved for employment and job opportunities accounts to 16 percent. Another 12 percent of migration was due to migration of family.

While this represent the picture for the Republic, the reason for migration differs at different localities. Figure 14 summarizes this by the four main reasons for which the resident Maldivian population has migrated. For Male', education is the main reason why the population has moved to current residence. This is followed by the population returning to live in their usual residence. In the atolls (including Administrative and Non- administrative), the change in residence is characterized by the population returning to live in their island. The second highest flow of movement of the population is for employment opportunities, while in administrative islands a proportionate population has changed their residence due to marriage and to live with their family due to family migration. In non- administrative islands, migration for employment is the main reason.

It is important to look at the distribution of migrant population by reason for male and female. As shown in figure 15, male migratory movement is mostly for employment. Males returning to live in their residence is the second highest reason.

In contrast, the migratory pattern is quite different among the female population. Many of them have reported to have been return migrants to their place of usual residence. This is followed by migration for education. Several women have migrated due to family migration and as a result of marriage. Females who migrated as parent/ guardian is more than the male migration for this reason. Migration for employment is a lesser priority for the female population.

The reason for migration differs among different age groups. Among the younger cohort, majority of the population less than 10 years have migrated as a result of family migration to live in this island. Migration for education is highest among children and young adults. Migration for employment is highest at the age of 25-29 years and gradually decline over the years. At the same time, the pattern of return migrant is seen from 15 years and increases as they age.

Distribution of Resident Foreign Population

Census 2014 enumerated 63,637 foreigners as residing in Maldives. The foreign population accounts for 16 percent of the resident population and 88 percent of the foreign population comprises males. The foreign population is distributed across the country, majority of them living in Male' (40 percent) and in non-administrative islands (36 percent). As shown in Figure 17, the highest percentage of foreign population was enumerated in Male' Atoll (K) followed by South Maalhosmadulu (B) and South Ari Atoll (ADh).

Figure 17: Percentage distribution of foreign resident population by Atoll

The foreign population consists of many different nationalities with Bangladeshis succeeding with 58 percent and Indians contributing to 20 percent. Figure 18 shows the foreign population residing in Maldives by their place of birth. In all administrative divisions, the Bangladeshis are highest. Indian born population is more in Male' while foreign births of other nationalities in second highest in non- administrative islands. Sri Lankans mostly reside in Male' and Non- administrative islands. Around 569 foreigners were reported as being born in Maldives.

Figure 18: Foreign population by country of birth, 2014

Figure 19: Foreign population living in Maldives by place of birth

Census 2014 also captured the duration of stay in Maldives for the foreigners. Most of the foreign population has lived in the country for 1 to 2 years. The duration tends to get more as foreigners live in the country for between 5 to 9 years. The population living for more than 10 years gets reduced, showing signs of return migration to home countries. Only 9 percent of the foreign population lives in Maldives for more than 10 years.

Figure 20: Percentage share of foreign population by duration of stay in Maldives

Figure 21 presents the duration of stay in Maldives by different nationalities. As Bangladeshi's are majority in number in the country, their duration of stay in Maldives is higher than other nationalities. Majority of the Indians stay in the country for 5-9 years while Sri Lankans tend to stay in the country for less than 3 years. Foreign populations of other nationalities have a similar pattern as Sri Lankans and majority of them stay for a duration of 1-2 years.

Lifetime Migration

A person whose usual residence differs from his birth place is a lifetime migrant. Census 2014 shows a population of 147,883 to be lifetime migrants. Of which 54% were males and 46% were females. Among the lifetime migrants 45% were usual residents of Male' and 55% were usual residents from Atolls (both administrative and non-administrative islands combined)

Table 3: Lifetime Migrants

	Usual Resident Maldivian	Lifetime Migrants			
		Total	Male	Female	Share
Republic Male'	338,434	147,883	79,734	68,149	100%
	126,080	66,736	32,928	33,808	45%
Atolls (Administrative and Non-Administrative)	212,004	80,889	46,607	34,282	55%
Not Stated	350	258			0%

As seen in figure 22, the number of lifetime migrants are highest in Male' Atoll (K) (14 percent) as the residents of Male' atoll have easier access to hospital facilities at Male' and also the significant number of residents of this Male' Atoll resides in resorts who are from different atolls and hence place of birth differs from usual resident island. The number of lifetime migrants is the lowest in Felidhu atoll (V) and Gnaviyani atoll (Gn) where each atoll shares just 1 percent of the lifetime migrant population. Felidhu atoll (V) being the lowest populated atoll and Gnaviyani atoll (Gn) being the single island atoll, the number of lifetime migrants is the lowest comparatively.

Figure 22: Lifetime Migrants in Atolls**Figure 23: Lifetime Migrants by place of birth**

Figure 23 shows the share of lifetime migrants who were born in Male', respective atoll and other atolls. As depicted in the figure, in almost all atolls – the number of lifetime migrants were mostly born in Male' and a substantial number's place of birth is the respective atoll.

North Miladhunmadulu (R), North Maalhosmadulu (Sh) and Hadhdhunmathi (L) have the highest share of lifetime migrants who were born in the respective atoll. Lifetime migrants born in Raa atoll is highest as a whole new island (Dhuvaafaru) was developed within that atoll to host the population of Kandholhudhoo which was destroyed by the 2004 tsunami. Hence all the persons in the newly developed island will be lifetime migrants. Given the definition of lifetime migrants, Ganviyani atoll showed zero as it is a single island atoll.

Figure 24 shows the further analysis on the lifetime migrants of Male' by their place of birth. Amongst lifetime migrants, 11 percent were born in Addu (S) followed by 10 percent born in South Huvadhu Atoll (GDh) Atoll. 4 percent of the lifetime migrants of Male' were born abroad.

Non-Resident Maldivian Population

Although non-residents are not considered a part of the resident population; few questions were incorporated in the census 2014 to identify the demographic characteristics of this population. A total of 5,589 were counted as non-resident Maldivians.

Figure 25 shows the non- resident Maldivian population pyramid where male and female exhibits almost an identical pattern. Most out-migrants were youths with age between 20 and 34 years. This group contributes 41 percent of non-resident Maldivian population where female and male population share was 21 and 20 percent respectively. Reason for migration was not asked for this population; however it is likely that people of this age cohort go abroad for education.

Figure 25: Non-Resident Maldivian Population Pyramid

It can be observed from figure 26 that majority of non- resident Maldivian population, precisely 72 percent were enumerated in Male'. More than two third of non-resident Maldivian population enumerated in Male was youth aged between 15 and 34 years of age and the majority (25%) of them were youth aged 20-. Furthermore the share of female and male non-resident Maldivian population in Male' was 53 and 47 percent accordingly.

The similar pattern of age distribution has been observed for atolls. The share of people aged between 15 and 34 stood at 58 percent and among them the youth aged 20-24 constituted 26 percent. The share of female and male population in atolls was opposite to that found for Male. The proportion of male non-resident Maldivian population accounts for 53 percent while it is 47 percent for female population.

MIGRATION
